

7.3 | Language & Accessibility

The **Language & Accessibility** page allows you to customise the interface language and on-screen keyboard behaviour to suit your device and operating preferences.

Language

Selects the display language used throughout Level COMMAND.

For the best experience, restart **Level COMMAND** after changing the language.

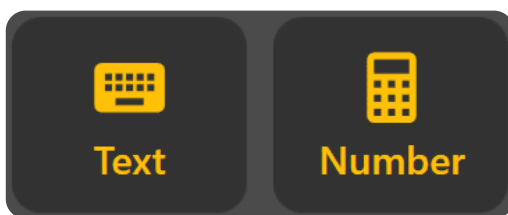

Use Screen Keyboards

When enabled, Level COMMAND automatically opens the appropriate on-screen keyboard whenever text or numeric input is required.

This setting is particularly useful when using tablets or touchscreen devices without a physical keyboard.

Keyboard Test

The **Show for Text** and **Show for Number** buttons allow you to verify that the configured on-screen keyboards are operating correctly.

- **Show for Text** - Opens the text keyboard.
- **Show for Number** - Opens the numeric keypad.

These options are intended as a quick test if the on-screen keyboard is not appearing as expected.

If the On-Screen Keyboard Does Not Appear

If the Windows on-screen keyboard does not open automatically:

- Verify that **Use Screen Keyboards** is enabled.
- Confirm that the Windows on-screen keyboard is installed and enabled.
- Connect a physical keyboard if required.

Refer to the Microsoft Windows documentation for additional information about configuring on-screen keyboards.
