1.3 | Intended Use

Supported equipment and tasks

Use T3RRA In-cab Software on supported construction, landforming and earthmoving machinery fitted with compatible hardware, GNSS receivers, hydraulic interfaces and machine sensors.

During earthmoving and landforming, the system assists operators with terrain guidance, grading, surface control and automatic implement positioning.

Performance and operator responsibilities

Performance depends on all of the following:

- Correct installation
- Machine calibration
- GNSS signal quality
- Terrain conditions
- Hydraulic performance
- Operator supervision

T3RRA In-cab Software provides operator assistance and terrain control; it does not transfer responsibility from the operator. At all times, the operator is responsible for safe machine operation, terrain awareness and final work quality.

Only personnel familiar with machine-control systems and safe equipment operating procedures may operate the system.
