

Choose Mode - 2D or 3D

Mode

2D View - By default the map will be displayed in a 2D aerial view.

3D View - When switching to 3D view the map will show all the terrain as small hills and valleys. In this viewing mode if you press the vertical scale magnifier (shown here) it will increase the exaggeration of these hills and valleys so that they can be more easily identified. The focal point when viewing in 3D can be changed by quickly double tapping on a position.
