Overview

T3RRA Cutta Desktop offers several tools for analysis beyond what is included in our In-cab packages. These tools allow the user to further analyze and understand how their design will perform once implementation has been completed.

Circle Guide - Creates a circle for reference on the surface.

Elevation Grid - Overlays a grid with elevation values at each junction.

Flow Paths - Overlays arrows in a grid pattern that show the estimated direction of flow at each junction.

Watershed - Identifies the areas of the surface that will flow together to the same exit point on the field.

Edit Markers - allows you to view, edit, and create markers on the elevation surface.
