

Change pixel size for all surfaces

The function of this tool is to change the size of the pixels across all surfaces.

The pixel sizes are read in meters, for example if the pixel size is set to 2 then each square dot on the screen is equal to 2 square meters in the real world. The sizes available in T3RRA Design Plus go from 0.5 meters all the way up to 1024 meters.

there will be on the surface in the working area and vice versa, however the smaller the pixel size the more strain T3RRA Design Plus will put on your computer, so use at your own discretion.
