Contents

Export to *.gps control file is too far from benchmark

Export to *.gps control file is too far from benchmark

Symptoms:

When the .gps file is loaded into the display, the system complains that the field is too far from the benchmark.

Cause:

When the previous design's field is left selected in the display, it will try to use the previous benchmark, which may be too far away.

Solutions:

Select the correct Client, Farm, and Field. You may need to create a new field to load the design into.
