Starting T3RRA Software

On most installations, T3RRA software is configured to **start automatically** when the tablet PC boots. If the software does not start automatically and you would like this functionality enabled, refer to the accompanying troubleshooting guide for configuration instructions.

If T3RRA software has not started automatically after Windows has finished loading, launch it manually by **double-clicking the appropriate desktop shortcut**.

Once started, the T3RRA software home screen will be displayed.
