

Map icon on the T3RRA software screen lags behind the actual field position.

Symptoms:

The screen update appears to be “laggy”. When you turn a corner and are back on a straight path you may see that the position icon on the screen is still turning the corner.

Cause:

This normally indicates that the software is having to do a lot of calculations, or that there are insufficient resources (CPU, HDD, Memory) available on the tablet.

Solutions:

- 1. Check for updates online. There may have been performance enhancements included in newer versions of code.**
- 2. Check that the tablet you are running meets our minimum specifications.**
- 3. Do any Windows updates that are pending.**
- 4. Make sure that your tablet has no other applications running. Close any unneeded applications.**

5. **Divide the work area in your project into smaller areas. Having to process a smaller data set should result in better performance.**
 6. **Surface your elevations with a larger pixel size. Larger pixel sizes result in smaller data sets and this will result in a performance increase.**
